

SPEC CPU 2017 Runs

--size=ref --noreportable as 600.perlbench_s crashes for test.

- Seconds: Runtime of benchmarks. Lower is better
- Ratio: Time on reference system / time on SUT. Higher is better
- Base Score: SPECspeed2017_int_base metric. Higher is better
- v1.2.1-7 (fc8ddf76): Translator version. <last git version tag>—<no. of commits between HEAD & last tag> (latest commit hash)
- DBT:QEMU ratios*: Ratio between QEMU and DBT, so that lower is better.
- Indicates how many times slower DBT is to QEMU.
- **:: Not accurate, as the 625.x264_s data is from a separate run
